

More from the Industry on the DMTF's DASH Initiative

March 22, 2007

AMD

“As a founding member of the DASH working group and key contributor to the specification, AMD is pleased to see the broad adoption of DASH in the industry,” said Terri Hall, vice president, Software Alliances and Solutions, AMD. “AMD continues its standards leadership by developing a comprehensive set of DASH test tools, available to all vendors, to ensure DASH solutions in the market are truly interoperable and realize the full value of DASH to IT customers.”

Avocent

“Avocent will support the DMTF's new DASH management Initiative for desktops and mobile systems, and we look forward to working with our customers and partners to deliver products based on this new Web services-based standard,” said Dave Perry, executive vice president, Avocent Corporation. “DASH will help extend standardized management capabilities into these new domains – reducing the complexity for our joint IT customers.”

NVIDIA

“We are happy to support the DMTF's DASH in our nForce Media and Communication Processors,” said Manoj Gujral, general manager for Commercial Platforms, NVIDIA Corporation. “By providing a unified and comprehensive framework for desktop and mobile management – from the necessary protocols to the helpful DMTF profiles – DASH delivers renewed simplicity, which will allow NVIDIA to deliver common management benefits to end users of Intel and AMD platforms built with NVIDIA nForce core-logic solutions.”
