SUPPORTING DOCUMENT 7

Introduction

This document describes errors reported in EML 4.0h, the CORE customisations v2.1 and the supporting document "EML: Customization for UK Electoral Registration Systems" version 0.4.

EML Schemas

In the EML core `emlcore-v4-0h.xsd`, the child elements `Name` and `Association` of `PollingDistrictStructure` have no data types. They will therefore accept any textual data. They should both be of type `xs:token`.

Schematron Schemas

No errata identified.

Supporting Document

In the section "Splitting of Messages", the repeated element for 330-electionlist is shown as "Voter". This should be "VoterDetails". The Schematron schema that checks this rule is correct.

The description of schema 340 does not have the diagrams to expand the "Election" element. These are included below:
